

Information on Bullion (Investment) Coins

Bullion (investment) coins are a legal tender of the Republic of Belarus, undergo quality control, and, when issued into circulation by the National Bank of the Republic of Belarus, have a proper quality. It is allowed to sell bullion (investment) coins, which may have technology-driven permissible deviations (slight bevels, gouges and burrs on the edge and milled edge, and variation in the intensity of the gloss of the matte surface on bullion (investment) coins) the presence of which is not a basis for classifying them as bullion (investment) coins of inadequate quality.

Bullion (investment) coins are sold at selling prices that differ from the face value, and may be collectibles, as well as accepted by banks at the face value as a legal tender of the Republic of Belarus, unless otherwise provided for by legislation.

Bullion (investment) coins, during storage both before and after their sale, are subject to a natural oxidation process, which may cause slight stains on the surface of bullion (investment) coins. The presence of stains does not affect the consumer characteristics of the bullion (investment) coin and the content of the precious metal in the bullion (investment) coin, as well as is not an obstacle to the sale of bullion (investment) coins.

It is advisable to store bullion (investment) coins in a capsule, blister package or a box in order to avoid additional contact with the external environment and damage to the surface of bullion (investment) coins. It is not recommended to open the capsule or a blister package, which contains the bullion (investment) coin.
